

Remarks/Arguments:

The specification is amended, hereby, to correct clerical errors readily apparent to the skilled artisan.

More precisely, the rewritten passages describe dimers of TGF- β 1 amino acid sequences. The original passages describe "s-s" bridges at "cytosins" of the amino acid sequences. Obviously, cysteins are meant, because cytosins are part of nucleic acid sequences, and cysteins are part of amino acid sequences.

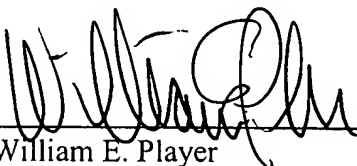

Furthermore, the dimers at issue, described as having an "s-s bridge" at the "AAPC motif," show a bridge between two other amino acids in the original text. The amendment corrects the error, i.e., to show the bridge at the AAPC motif of the dimers.

Favorable action is requested.

Respectfully submitted,

JACOBSON HOLMAN PLLC
